

TECHNICAL DATA SHEET

Starlose®

Starlose® is a cold-water soluble low viscosity, non-ionic starch polymer for use in all water-based drilling, completion and stimulation fluids. Starlose polymer is a natural polysaccharide designed to provide rapid, economical filtration control in a variety of oil and gas operations. Biocide addition during the manufacturing process enhances performance in many drilling environments. Starlose is an economical fluid loss additive for low-temperature drilling fluids and for applications where rapid fluid loss is required for relatively short time intervals. Starlose is stable to 225° F, and is compatible with high salt, calcium and other mineral fluids.

Starlose polymer meets API specifications according to Spec 13A, Section 11.

Starlose is permitted for use in the Gulf of Mexico. In addition Starlose was tested to be nontoxic to Mysid shrimp according to the protocol of 58 FR 63964 as specified in the general NPDES permit for oil and gas activities on the Gulf of Mexico OCS.

Hydration

Starlose hydrates quickly in cold water. During production, the polymer undergoes a pre-gelatinization process that converts the polymers from an insoluble form to a cold-water dispersible form.

Appearance

Starlose is a free-flowing, off-white powder with opaque to translucent aqueous solutions.

Solution Preservation

Starlose is treated with a biocide during the manufacturing process. Under normal operating conditions, mud systems containing Starlose are stable from microbial and enzymatic attack.

Storage, Handling and Safety

Because of the hydroscopic nature of Starlose, it is highly recommended that the material be stored in its original package in a dry facility. Shelf life can be affected by storage conditions such as temperature, humidity and overall surroundings of the storage area. A Safety Data Sheet is available and should be consulted prior to handling or use.

Availability

Starlose is available in 50 lb multi-wall poly-lined paper bags for truckload and LTL shipments. For additional information, samples or technical assistance in using Starlose please contact 1-800-328-5037 or info@chemstar.com

TECHNICAL DATA SHEET

Typical Analysis

	Starlose
Base Starch	Corn
Form	Powder
pH (6% Solids)	5.0 – 8.0
Moisture (%)	12 Max
Density (lb/ft³)	30 – 50
Particle Size (% thru)	99 (-) 850 micron
Appearance	Off-white
Typical Usage Rates	4 – 6 ppb (11.4 – 17.1 kg/m³)
Ionic Character	Nonionic
